Package Builder for Siemens

Product Sheet and

Specific Terms

Document Version: v1.1 (October 2022), PRC

1. Introduction

Package Builder for Siemens allows you to create your own packages according to your customers' needs using different MindSphere modules and/or MindSphere core Applications in order to offer them to your customers. Such packages can consist of your Application which has been deployed to the MindSphere productive environment and selected MindSphere modules and/or MindSphere core Applications ("**Package**").

1.1. Prerequisites

Item	Description
Subscription	A valid MindAccess Operator Plan (Small/Medium/Large) subscription is required.

1.2. Description

Item	Description
General	Package Builder for Siemens grants you access to: • The Package Builder Tool which allows the creation, configuration, activation and publishing of your Packages, • The specific APIs to control provisioning and billing of your configured and released Packages into a new or existing MindSphere Account of your customer. You can select and bundle different MindSphere modules and/or MindSphere core Applications set out below with your Application in order to create your own Package. If your Package does not include your Application, you need to combine it with a Package that includes your Application; in such case, selling this Package without your Application through the Store is not possible. It is not required that your customers have subscribed to a MindAccess IoT Value Plan in order to be able to subscribe to your Package. However, it is your responsibility as a Package Builder to add the MindSphere modules and/or MindSphere core

	Applications required for successful utilization of the Platform and the Application included in your Package.

2. Available MindSphere Modules and MindSphere Core Applications

The following MindSphere modules and MindSphere core Applications are available in Package Builder for Siemens to be part of your Package. The *Specific Terms for MindAccess IoT Value Plan* available on https://help.aliyun.com/document_detail/123950.html shall apply accordingly to the MindSphere modules and MindSphere core Applications set out below. In particular, your customer contract for the Package must make clear that, at a minimum, the full substance of the Minimum Terms (including the Acceptable Use Policy) applies to the MindSphere modules and MindSphere core Applications which are part of your Package if your customer provides OEM Customers with access to these MindSphere modules and/or MindSphere core Applications. Unless indicated otherwise, capitalized terms used in this section shall have the meaning given to them in the *Product Sheet for MindAccess IoT Value Plan* available on https://help.aliyun.com/document_detail/123950.html.

Item	Description
Base Tenant module	The module *Base Tenant* provides your customer with a dedicated Account (also referred to as "Tenant") on MindSphere. It enables your customer to login to its Account via the respective URL provided by us and is a key prerequisite for all Packages and applications. A Base Tenant will be automatically added to your Package and provisioned to any of your customers who (i) do not have an existing MindAccess IoT Value Plan Account or Base Tenant, or (ii) who decide to use an additional Base Tenant. This module includes 1 Admin User and provides your customer with the following administration tools available on the MindSphere Launchpad: • Usage Transparency • Settings • Asset Manager • Upgrade
User module	The *User* module allows you to add single Users to your

		Package.
	Agent module	The *Agent* module allows you to add single Agents to your Package.
	Agent Basic module	The *Agent Basic* module allows you to add single basic Agents (**"Basic Agent"**) to your Package. Unlike an Agent provided under the *Agent* module, a Basic Agent offers limited functionality and is designed for those customers who only need the communication functionality of an Agent. This is the case when a customer uses a self-developed Agent that communicates with a Self-hosted Application through the gateway. The Basic Agent functionality is limited to the onboarding and authentication mechanism of the Platform.
	Asset Type module	The *Asset Type* module allows you to add single asset types to your Package.
	Asset Instance module	The *Asset Instance* module allows you to add single asset instances to your Package.
	Time Series Data Ingest Rate module	The *Time Series Data Ingest Rate* module allows you to add data ingest rate in incremental steps of 0.01 kB/s to your Package. Time series data ingest rate represents the rate at which the sensor data is ingested into the Platform. Data ingest is based on number of Assets, number of variables per Asset, size per variable including overhead, read cycle intervals and sending frequency. This depends on the size of the requests containing time series data sent from the customer to the Platform. Time series data ingest rate is restricted to a maximum of 100 kB/s per Asset.
	Time Series Data Storage module	The *Time Series Data Storage* module allows you to add time series data storage in the incremental steps of 0.5 GB to your Package. Time series data storage represents the total volume of time series data ingested and stored in the Platform for a Tenant.
	Subtenant module	The *Subtenant* module allows you to add single Subtenants (also referred to as "OEM Subaccounts") to your Package. By adding Subtenants to your Package, it can be used by your customers as part of OEM Services as described in the Specific

	Terms for MindAccess IoT Value Plan available on https://help.aliyun.com/document_detail/123950.html.
Notifications module	The *Notification* module allows you to add the number of notifications of the type email and mobile push in incremental steps of 2 notifications to your Package. The number of notifications added to your Package determines how many notifications your customer can trigger in total. This module is based on MindSphere's Notification Service. The terms and conditions set out in the MindSphere Supplemental Terms for Notification Service available on https://help.aliyun.com/document_detail/123950.html also apply to this module.
Event module	The *Event* module allows you to add events in incremental steps of 1000 events to your Package. An event documents the occurrence of a defined situation (e.g. starting a motor).
IoT File Storage module	The *IoT File Storage* module allows you to add IoT file storage in incremental steps of 0.5 GB to your Package. IoT file storage represents the total volume of files uploaded and stored on the Platform for an Account.
Rules module	The *Rules* module allows you to add active concurrent rules in incremental steps of 1 rule to your Package. Rules refer to the functionality within the Fleet Manager core Application or your Application using the MindSphere Web Components 'Rules View' to create and configure rules that monitor variables of an Asset. Please note that certain further MindSphere modules are required in your customer's Tenant in order to use the Rules module. Please refer to the Package Builder for Siemens System Manual for detailed information on mandatory and optional MindSphere modules. The Specific Terms and Third Party Terms set out in the MindSphere Supplemental Terms for Fleet Manager and Rules in Fleet Manager available on https://help.aliyun.com/document_detail/123950.html apply accordingly to this module.

Visual Flow Creator Compute Hours module	The *Visual Flow Creator Compute Hours* module allows you to add single computing hours to the Visual Flow Creator core Application's compute hours capacity. Computing hours represent the available execution time for workflows created in the Visual Flow Creator core Application. This module can only be used in connection with the Visual Flow Creator core Application. Third Party Terms for Visual Flow Creator are available via the following web link: http://sie.ag/MindSphere-ThirdParty_VisualFlowCreator.
Fleet Manager core Application	The *Fleet Manager core Application* can be added to provide your customer with access to the Fleet Manager core Application. Fleet Manager allows your customers to display and monitor measured data and information from its Assets at one central point. The Specific Terms and Third Party Terms set out in the MindSphere Supplemental Terms for Fleet Manager and Rules in Fleet Manager available on https://help.aliyun.com/document_detail/123950.html apply. Please note that certain further MindSphere modules are required in your customer's Tenant in order to leverage the full scope of the Fleet Manager core Application. Please refer to the Package Builder for Siemens System Manual for detailed information on mandatory and optional MindSphere modules.
Visual Flow Creator core Application	The *Visual Flow Creator core Application* can be added to provide your customer with access to the Visual Flow Creator core Application. Visual Flow Creator enables your customer to design own workflows via drag and drop functionality to develop graphic depiction of workflows. Your customer can choose from a variety of pre-configured nodes provided by Siemens or your customer can deploy its own nodes to Visual Flow Creator for use in its workflows. Your customer can create the workflows with the web-based editor to analyze and generate new virtual data

	points or deliver the formatted data for reporting tools. The workflows can be triggered manually, time-based or via RESTful call. Your customer can calculate KPIs or trigger actions. The Specific Terms and Third Party Terms set out in the MindSphere Supplemental Terms for Visual Flow Creator available on https://help.aliyun.com/document_detail/123950.html apply. Please note that certain further MindSphere modules are required in your customer's Tenant in order to leverage the full scope of the Visual Flow Creator core Application. Please refer to the Package Builder for Siemens System Manual for detailed information on mandatory and optional MindSphere modules.

3. Pricing Model

Item	Description	
Fee for	Package Builder for Siemens	
Fee	0 CNY	
Billing cycle	n/a	
Pricing for MindSphere modules and core Applications	MindSphere modules/core Applications	Fee per month
	1 Base Tenant (incl. 1 Admin User)	0 CNY
	1 User	12.39 CNY
	1 Agent	82.59 CNY
	1 Agent Basic	15.49 CNY
	1 Asset Type	12.39 CNY
	1 Asset Instance	4.31 CNY
	Time Series Data Ingest Rate (per 0.01 kB/s)	3.61 CNY
	Time Series Data Storage (per 0.5 GB)	0.31 CNY
	1 Subtenant	61.95 CNY
	2 Notifications	0.1 CNY
	1000 Events	0.41 CNY
	IoT File Storage (per 0.5 GB)	0.31 CNY
	1 Rule	12.39 CNY
	1 Visual Flow Creator Compute Hour	41.3 CNY
	Fleet Manager core Application	51.62 CNY
	Visual Flow Creator core Application	0 CNY
Package Builder for Siemens	Your subscription to Package Builder for Siemens allows	

	you to create, edit and activate up to 50 Packages using the Package Builder Tool.
Payment terms	<u>For activated MindSphere modules and core Applications</u>: The fee of one provisioned Package will automatically be calculated based on the MindSphere modules and/or MindSphere core Applications contained therein. Upon activation of the Package by a customer, you agree to pay the stated fee for the MindSphere modules and/or MindSphere core Applications contained therein each time the Package is provisioned to a customer. We charge you on a daily basis at the end of each quarter (monthly in arrears; a month equals 30 days).
Subscription Term, termination	The Subscription Term for Package Builder for Siemens is 1 year. PLEASE NOTE: Be aware that the fees for the MindSphere modules and/or MindSphere core Applications which are part of your Packages will continue to be incurred even after termination of Package Builder for Siemens as long as your customers' subscriptions to your Packages are still active.
Adaptation of fees	We may change the fees due to, and to the extent required to, reflect: (i) changes in the quality or functionalities of the Service(s); (ii) material changes in market conditions; (iii) general increases in wages or other employment costs; and/or (iv) changes in procurement costs due to price changes made by our suppliers, in each case to the extent that the changes affect our provision of agreed Services (each a "Fee Change"). We will notify you of any Fee Change at least 60 days in advance of the effective date of the Fee Change. You may terminate the Services affected by the Fee Change prior to the effective date of the Fee Change. Any Fee Change will only apply from the

	beginning of a new/extended Subscription Term.

4. Specific Terms

Item	Description
Service Level Agreement	The Monthly Uptime Percentage for Package Builder for Siemens is 99,5%. Monthly Uptime Percentage is defined in the MindSphere Supplemental Terms available on https://help.aliyun.com/document_detail/123950.html.
Changes to the Product Sheet and Specific Terms	We may update this document from time to time during a Subscription Term in order to reflect any changes agreed with or imposed by our subcontractors (including changes in open source software license terms) or when we introduce new MindSphere modules, MindSphere core Applications, features, supplements, enhancements or capabilities (e.g. that were not previously included with the subscription but added for no additional fee). Changes shall become binding upon release of a new version of this document on https://c.tb.cn/F3.Zv6dwX.
Support	Support is provided in accordance with Chapter F of the MindSphere Supplemental Terms available on https://help.aliyun.com/document_detail/123950.html.
Third Party Terms	Package Builder for Siemens contains Third Party services, including open source software, commercial software, or software-related managed services, which are subject to additional or different terms, license rights, or require certain notices by their licensors, which we are obligated to pass on to you as your licensor and to which you agree to abide (**"Third Party Terms"**). The Third Party Terms are made available via the following web link: https://sie.ag/MindSphere_ThirdParty_PackageBuilder.
Combination of MindSphere modules and/or MindSphere core Applications under one Account	Your customer can decide if a Package shall be provisioned to a new Base Tenant or an existing Account (Base Tenant or MindAccess IoT Value Plan Account). Please be aware that Packages built with Package Builder for Siemens are specific to the data center location that your MindAccess Operator Plan is

	using. Your customer can only choose to have a Package provisioned to an existing Account if both the Package and the Account are hosted in the same data center location. If your customer decides to add various Packages to one existing Account, the MindSphere modules and/or MindSphere core Applications included in the various Packages will be combined under one Account; it is your customer's responsibility to allocate the MindSphere modules and/or MindSphere core Applications to the various Packages according to its needs.

5. Export Control Regulations
